Introduction

WP1 concept

The goals of the project are:

1. To simulate CDO trajectories for different aircraft models and weight conditions
2. To analyse the sequencing of multiple CDO arrivals to Barcelona airport (LEBL)

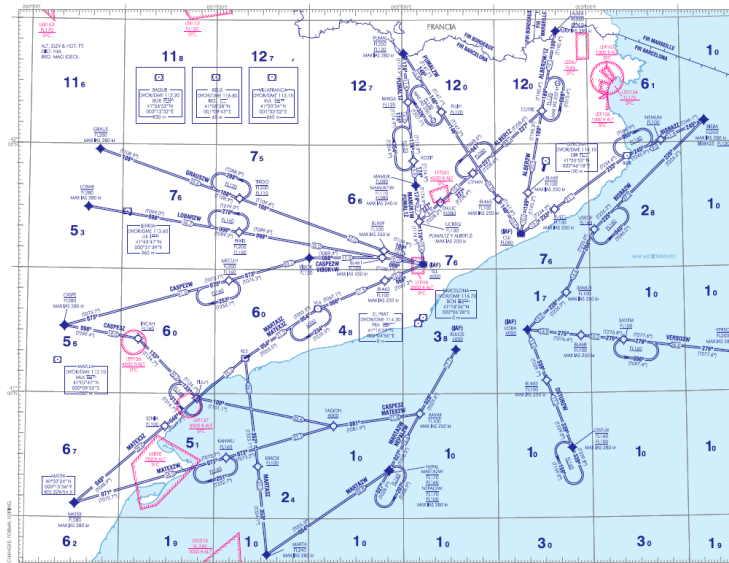

Structure:

1. **Literature research** about CDOs and AMANs in qualified sources of information (such as books, journal papers or proceedings papers):
 - Advantages and drawbacks of CDOs
 - Technology required to use CDOs
 - Some background about CDOs and AMANs
2. Development of the **CDO trajectory simulator**
 - You can find all formulation in the SoW document
 - Five aircraft models have to be considered

WP1 concept

Structure:

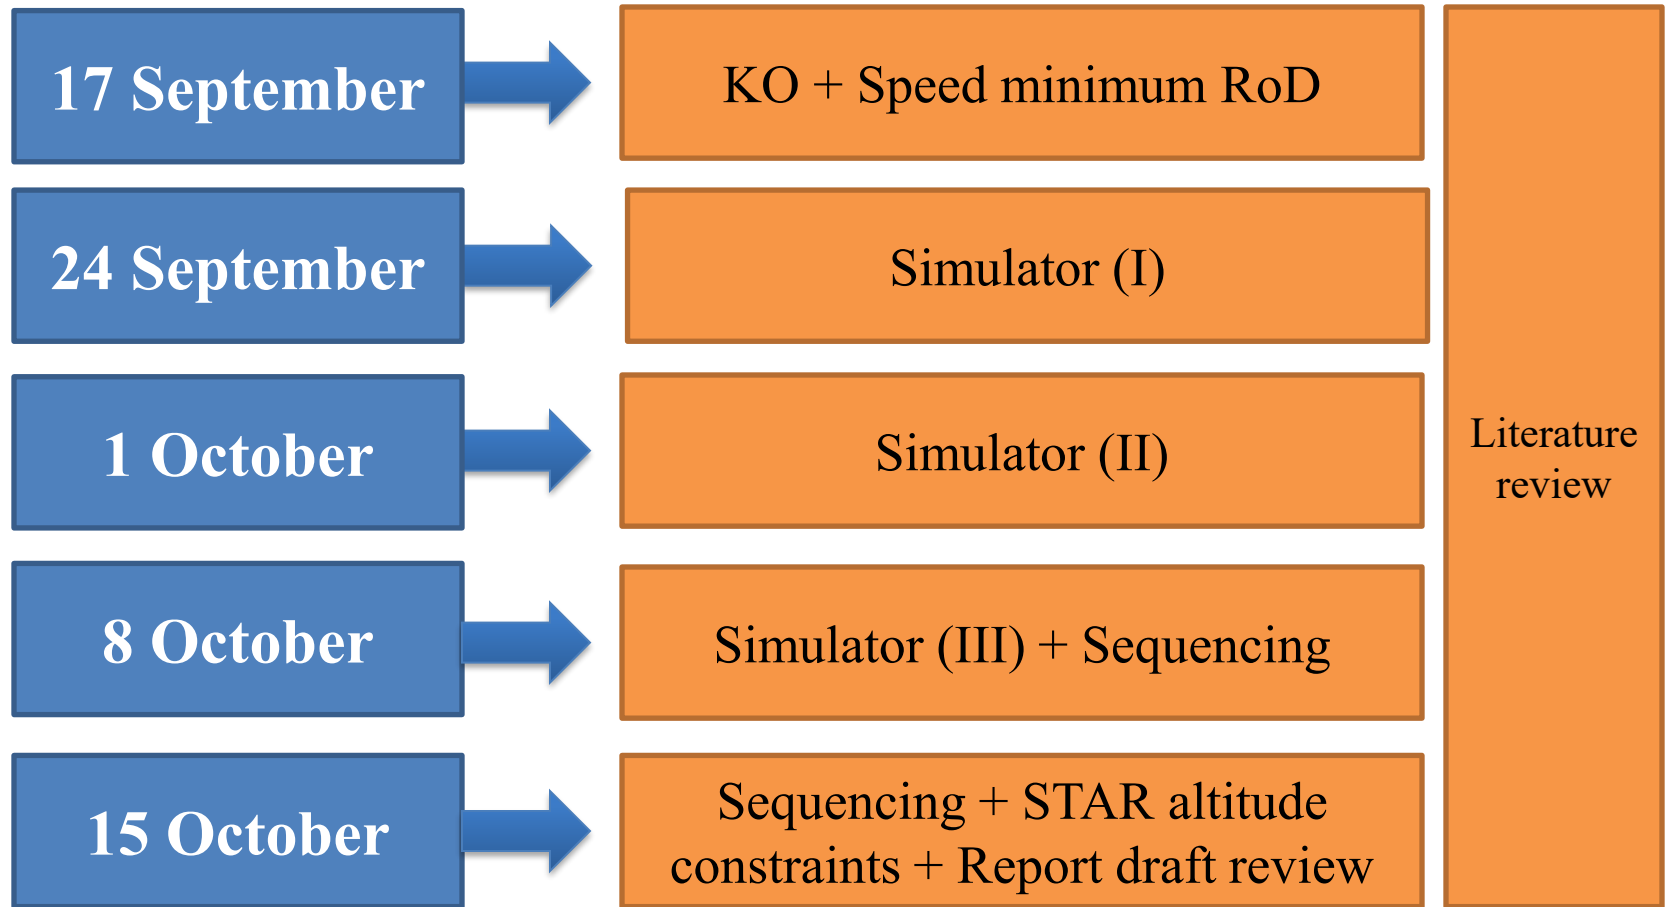

3. Analyse the impact of introducing multiple simultaneous CDOs in STARs of RWY 24L from Barcelona airport (LEBL).

From Enaire's AIP

3. Write a paper. You must use the template uploaded to Atenea (max. 8 pages). It must contain: Abstract, background, simulator development methodology (**algorithm**), sequencing analysis, STAR altitude constraints, conclusions and references.

WP1 organisation

WP1 report deadline -> 5th November at 23:55

Thank you!!

Gràcies!!
